EDUCATION

- **MS IN ARTIFICIAL INTELLIGENCE** - MARCH 2024
 - Drexel University, Philadelphia, PA
- **BS IN COMPUTER SCIENCE** - MAY 2019
 - University of Maryland, College Park, MD

CERTIFICATES/ AWARDS

- Eagle Scout - Sep 2011
- Coursera Deep Learning - June 2020
- Coursera Generative AI Engineering with LLMs - October 2024

KEY SKILLS

- Python/MATLAB
- PyTorch
- GIT
- Pydata stack

GRAD COURSES

- Machine Learning
- Deep Learning
- Applied Artificial Intelligence
- Quantitative Data Science

PERSONAL PROJECTS

- New Wave Location Finder
- Surf Forecasting Dashboard
- WSL Wave Score Analysis
- Sudoku Solver

PROFILE

I am an enthusiastic developer with backgrounds in software engineering, machine learning development, and data science. I have learned a great deal from and enjoy working on teams that expand my knowledge of the project and latest technology.

EXPERIENCE

MACHINE LEARNING ENGINEER • JUNE 2022 – PRESENT

Leidos • Chantilly, VA

- Maintained and improved performance of ConvLSTM model by increasing batch size and training dataset size, updating performance metric, and tuning the model's architecture
- Developed a new model to replace existing ConvLSTM using a transformer architecture with a conventional CNN for the encoding of the input data
- Aided in the development of a signal type detection method, modeling different signals, such as a beat tone or drift tone and marking each one with bounding boxes using OpenCV
- Re-engineered R&D code originally developed for AIS track prediction into generalized python package ready for integration into larger tracking systems
- Performed thorough data analysis on real data to aid with the validation of ML models and to help improve the data synthesis process by modeling each individual frequency in the data
- Participated in field testing, working closely with the customer to test current data collection methods and acquire real data that was used to improve ML training data simulation
- Lead the development of a data generator and rest API in Python to demonstrate the ability of existing MATLAB application

SOFTWARE DEVELOPER • JULY 2019 – JUNE 2022

Leidos • Gaithersburg, MD

- Facilitated transfer of data from multiple sources in different formats to JIRA/Confluence by writing Python script to automate the process
- Upgraded and tested multiple Visual Basic 6 applications to the more modern .NET 2019
- Reduced diagnostic time in JIRA by writing analysis script to analyze log data in Python
- Simplified SLOC counting process runtime by refactoring original script to automate more of the process and increase efficiency in the code
